Claims 1-43 are currently pending and under examination.

Claims 28-29 and 39-40 are objected to under 37 CFR 1.75 as being substantial duplicates of claims 24 and 35, respectively. When two claims in an application are duplicates or else are so close in content that they both cover the same thing, despite a slight difference in wording, it is proper after allowing one claim to object to the other as being a substantial duplicate of the allowed claim. See MPEP § 706.03(k).

Claims 24 and 35 are drawn to an *apparatus* whereas claims 28, 29, 39 and 40 each recite temperature conditions during a polymerization *process*. It is not clear from the antecedent disclosure what if any structural limitation(s) is added to the apparatus of claims 24 and 35 by the recitation of temperature conditions in an intended use thereof. Identification of further structural limitations imposed by said dependent claims or cancellation or amendment thereof is required.

Claims 24-43 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. More specifically, the following grounds for indefiniteness apply to the indicated claims.

Claims 24 and 35 each provide the limitation to "the *at least partially cured* polymer ...". There is inadequate antecedent basis for this limitation in the claims.

Likewise, claims 29 and 40 each provide the limitation to "the polymerization temperature," which lacks proper antecedent basis in the respective parent claims.

The prior art made of record and not relied upon is considered pertinent to applicants' disclosure.

Freitag et al is pertinent to the use of a plurality of plungers to feed reactant(s) from at least one header barrel through a plurality of transfer lines into a plurality of (semi)continuous reactor vessels (note claims 1 and 12).

Baxter et al is pertinent to shell and tube reactors for olefin polymerization (note Fig. 1).

Nowakowsky et al is pertinent to the production of crosslinked polymers in a single-screw cylindrical mixer equipped with a stirrer shaft having disk segments and mixing bars (note Fig. 1).

Claims 1-23 are allowable on the present record. Claims 24-43 would be allowable if rewritten or amended to overcome the objection and the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

The following is a statement of reasons for the indication of allowable subject matter: The claimed method of preparing a polymer employing at least one reaction chamber configured as a linear void space as defined in independent claims 1 and 14, and including the step of removing essentially all of the polymer from each reaction chamber with a harvesting plunger traveling along the linear axis of the void space from the first end to the second end of each reaction chamber, is not disclosed nor fairly suggested in any prior art located or identified by the examiner as of the date of this

Office action. Likewise, an apparatus comprising the claimed combination of "at least one reaction chamber", "shell" and "at least one harvesting plunger" as defined in independent claims 24 and 35, is neither taught nor suggested in the prior art.
